# METADATA

or metainformation

is **structured data** that contains information about characteristics of other data (objects).

# Metadata can be:

## descriptive

Information about the intellectual content

*e.g. title author, date of publication, subject, description, unique identifier*

## administrative

Information to support management of a resource

*e.g. technical information on the file's creation and format, version, copyright information, licence*

## structural

relationships between components of a data object

*e.g. chapters in a book, files in a data set*

Questions?

# DISCLAIMER

This slide deck is part of the Lesson

**Fundamentals of Scientific Metadata:  
Why Context Matters**

published on **The Carpentries Incubator**.
